SUMMARY

I work as a data specialist with a focus on automation and analytics within the education sector. With over ten years of experience in K-12 schools, I fix complex data issues across multiple connected platforms. I am responsible for the daily synchronization of data for over nine thousand students to ensure accurate rostering. I also write Python scripts with pandas to transform vendor assessment files into custom delimiter templates for our analytic platforms, with validations and exception outputs for follow up. I work with administrators, school boards and local officials to create Excel templates and dashboards to give them the answers quickly and translate educational trends into actionable solutions. I am seeking a remote role where automation, reporting quality, and durable workflows matter.

CORE SKILLS

Languages: SQL (Oracle/ANSI, T-SQL), Python, JavaScript (AngularJS), HTML/CSS, DAX

Data/Analytics: R, Excel/Sheets, data modeling, governance, KPI dashboards (Power BI, Looker Studio)

Integrations: REST APIs, secure SFTP/FTP, vendor onboarding (Clever rostering), file-based pipelines

Platforms/Tools: PowerSchool SIS (Oracle + APEX), Hoonuit (PowerSchool Analytics & Insights), Git/GitHub

Practices: Technical documentation, incident response, stakeholder collaboration, privacy & least-privilege access

Training Exposure: dbt, Snowflake, AWS, Google Cloud

SELECTED WORK

- District Clever platform operations (8 years): In 25-26 school year, Clever administered for 17 schools with 54 connected applications; maintained secure SSO and rostering for 9,764 students, 1,921 teachers, 789 staff, and 100,174 enrollments (8,453 sections / 767 courses).
- January 2026 Sync Logs recorded 28 Clever-related tickets with a 4.1-hour average resolution time while supporting a 138-ticket team queue overall.
- Operated production syncs and data feeds daily (weekdays) and managed 100+ scheduled SIS exports supporting vendor integrations and analytics delivery.
- Resolved feed failures same day (typically under 12 hours, before next scheduled sync) through fast triage, clear comms, and durable fixes.
- ETL/ELT: build repeatable vendor ETL workflows (exports, transforms, validations) feeding Hoonuit datasets and Looker dashboards for academic and operational direction.
- Internal tooling: develop PowerSchool SIS web pages and lightweight apps/APIs using HTML/CSS, AngularJS, and SQL to streamline staff workflows and reduce manual effort.
- Built Python scripts to automate daily operational tasks and reduce human error, including an activity eligibility mailer now used by the athletics department for a process they previously struggled to perform due to staffing limitations.

EXPERIENCE

Pennsbury School District - Data Analyst, Governance Specialist

2018–Present | Fairless Hills, PA

- Owned reliability of SIS-centered data workflows spanning identity/rostering, vendor integrations, and analytics surfaces across 17 schools.
- Conducted incident investigation and RCA across sync failures, data mismatches, and edge cases; implemented preventative controls (validation, scheduling guardrails, documentation).
- Analyzed recurring operational tickets to identify systemic problems and translate them into durable engineering work; partnered with cross-functional stakeholders and vendors.
- Wrote and optimized complex SQL for pipeline logic, audit-ready extracts, exception monitoring, and analytics delivery; supported both Oracle/ANSI SQL and T-SQL as needed.
- Developed internal tools and PowerSchool web pages (HTML/CSS, AngularJS, SQL) to reduce manual effort and standardize workflows.
- Created dashboards and recurring reporting for academic and operational decision-making (Looker Studio).

PESPA Union - Grievance Chairperson and Executive Board Member

Pennsbury Educational Support Professionals Association (2024 to Present) | Yardley, PA

- Lead the contract negotiation process for membership of ~600 members
- Restructured grievance intake, documentation, and follow up procedures.
- Serve on the union executive board and contribute to member representation, policy discussion, and contractual obligations.

EduCoreSIS – Founder, Developer, Consultant

Prelaunch edtech venture (2025 to Present) | Levittown, PA

- Built the business foundation for EduCoreSIS by defining services, shaping product direction, and planning for future growth and client delivery.
- Led app development and technical planning from concept to prototype, creating tools focused on school operations, reporting, and workflow support.
- Built strong working relationships through initiative, communication, and collaboration, helping move ideas forward with partners and future stakeholders.

Pennsbury School District - Systems Technician

2014–2018 | Pennsylvania

- Implemented secure SFTP servers and key-based transfer workflows supporting automated vendor integrations and reliable file delivery.
- Improved operational tooling and endpoint management practices (remote support, software deployment workflows) to increase reliability and reduce turnaround times.
- Supported Windows-based infrastructure and identity/access workflows in collaboration with district IT.

EDUCATION

- West Chester University — Bachelor of Computer Science (2009–2011)
- Bucks County Community College — Associate of Computer Science (2007–2009)
- Google Data Analytics & Business Intelligence
- IBM Data Science Professional Certificate
